```
1 public class PrintPairs {
2     public static void main(String[] args) {
3         int[] arr = {1, 2, 3, 4};
4         int n = arr.length;
5
6         System.out.println("All possible pairs:");
7
8         // Outer loop picks the first element
9         for (int i = 0; i < n; i++) {
10             // Inner loop picks the second element
11             // Start from i + 1 to avoid duplicate pairs like (1,2) and (2,1)
12             for (int j = i + 1; j < n; j++) {
13                 System.out.println("(" + arr[i] + ", " + arr[j] + ")");
14             }
15         }
16     }
17 }
```

All possible pairs:

(1, 2)

(1, 3)

(1, 4)

(2, 3)

(2, 4)

(3, 4)
